

Download Determinants Questions Solutions

About social determinants of health. The social determinants of health are the conditions in which people are born, grow, live, work and age. These circumstances are shaped by the distribution of money, power and resources at global, national and local levels. In linear algebra, the determinant is a scalar value that can be computed from the elements of a square matrix and encodes certain properties of the linear transformation described by the matrix. The social determinants of health are the economic and social conditions that influence individual and group differences in health status. They are the health promoting factors found in one's living and working conditions (such as the distribution of income, wealth, influence, and power), rather than individual risk factors (such as behavioral ... Evidence has suggested that social determinants of health and community service digital data sets add important information that the Agency may use to better predict and plan for the optimal use of limited resources and ultimately improve health outcomes.
