

Download How Many Types Of Polymers Are There

When you watch television, use a computer, ride in a bus, train, or plane, you are using plastics. When you go to the doctor's office or hospital or shop at the grocery store, you again are relying on plastics. Polymers are of two types: naturally occurring and synthetic or man made. Natural polymeric materials such as hemp, shellac, amber, wool, silk and natural rubber have been used for centuries. Figure 2. Schematic sketch of a typical Figure 3. Elastic deformation elastomeric network. of a rubber chain. Our combination of product and service makes us unique At ELIX Polymers we work to offer you the best service, together with innovation and development of our wide range of ABS products, always with the aim of satisfying the needs of our customers.
