small molecules that are the components of proteins. There are 20 different kinds of amino acids in living things. Proteins are composed of different combinations of amino acids assembled in chain-like molecules. Health Conditions. Explore the signs and symptoms, genetic cause, and inheritance pattern of various health conditions. I think you are talking about slide 11 (there is a tiny slide number in the bottom right corner that is mainly for my own use). So for x-linked recessive if you have a X^aY affected father and X^aX^a affected mother than all of the kids would have the disease, but you are unlikely to see that in a question because of how rare it is in real life. Tay–Sachs disease. Tay–Sachs disease, which can present as a fatal illness of children that causes mental deterioration prior to death, was historically extremely common among Ashkenazi Jews, with lower levels of the disease in some Pennsylvania Dutch, southern Louisiana Cajun, and eastern Quebec French Canadian populations. Since the 1970s ...
