

Download Means And Extremes In Math

When solving proportions in math, the outer terms in the calculation are the extremes, and the middle terms are called the means. When setting the proportion equation $a/b = c/d$, the a and the d figures are the extremes. It means the same in math as it means else where--it means not reasonable. If you show mathematical steps that are not reasonable to solve a math problem or show a math proof, then your math is ...Ratios and Proportions, Arithmetic & Geometric Mean, Means Extremes Theorem - Geometry Problems - Duration: 19:49.
