Molecular Formula finder: This tool allows to generate a list of molecular formula from an accurate mass. Specify the mass Calculating the Relative Molecular Mass (RMM) of Compounds. The Relative Molecular Mass of a compound is the sum of the masses of all the atoms present in the molecule. Worked Examples of Percent Composition Calculations. Example 1: Calculate the percent by mass (weight) of sodium (Na) and chlorine (Cl) in sodium chloride (NaCl) The molecular mass (m) is the mass of a given molecule: it is measured in atomic mass units (amu) or daltons (Da). Different molecules of the same compound may have different molecular masses because they contain different isotopes of an element.
