A telomere (/ t 1 m r / or / t 1 m r /) is a region of repetitive nucleotide sequences at each end of a chromosome, which protects the end of the chromosome from deterioration or from fusion with neighboring chromosomes. Historique. En 1971, le biologiste russe Alekseï Olovnikov émet pour la première fois l'hypothèse que la durée de vie maximale des cellules en culture (limite de Hayflick) est corrélée à la perte progressive de séquences télomériques. By Vince Giuliano In past blog entries and in my treatise I have explained how I was an early adapter at taking telomerase extenders like astrogalosite4 and cycloastragenol, and why, later as a result of following much research, I stopped ...
