

Download Violation Of Primary Key Constraint

As the error says, you're trying to insert a record to the table with a key value already existing in the table. The first thing to do is to have a look at the primary key definition. Open up SSMS and navigate to your table in your database. Expand the keys node and you should see the PK_Teacher. Right click it and select modify. This brings you to design window where you see the definition for your key. Diese Website verwendet Cookies für Analysen, personalisierte Inhalte und Werbung.
