

# Download X Linked Agammaglobulinemia Case Study

Born for Recovery: The Effects of Maternal Methadone Use on Neonates This interrupted case study presents the story of "Jane Paul," a 27-year-old pregnant woman excited by the prospect of bringing a new life into the world. Hypogammaglobulinemia is a problem with the immune system in which not enough gamma globulins are produced in the blood (thus hypo-+ gamma + globulin + -emia). Signs and symptoms. Most individuals with G6PD deficiency are asymptomatic. Symptomatic patients are almost exclusively male, due to the X-linked pattern of inheritance, but female carriers can be clinically affected due to unfavorable lyonization, where random inactivation of an X-chromosome in certain cells creates a population of G6PD ...Disease: Category: Pathogenesis / Heredity: Pathology, Cardinal Symptoms: Cystic Fibrosis: Autosomal Recessive. CFTR gene defect on Chrom 7 -----> No Cl-transport and failure to hydrate mucous secretions (no NaCl transport) -----> excessively viscous mucoid exocrine secretions
